

Oxfordshire Eco-renovation Directory

v2.7 APRIL 2010

Produced by: Oxfordshire ClimateXChange – www.climatex.org and COIN (The Climate Outreach Information Network) – www.coinet.org.uk / www.ecovation.org.uk
With financial support from the Fund for the Environment and Urban Life (FEUL):
and the Big Green Challenge Plus.

Introduction

The directory has been designed to showcase the range and supply of eco-renovation expertise in and around Oxfordshire. We hope you find it useful.
If you are at the early stages of seeing what is available, check out the free information first.

Providers of total solutions can suit busy people who just want the best answer.
The suppliers headings should help you identify the most suitable eco home improvements.

Please note: Publicising this information does not mean we endorse particular products or services. Before undertaking major eco-renovation we advise you to seek advice – for example see the buyers guides on the Energy Saving Trust website. Some entries may be outside Oxfordshire. This is either because they operate within Oxfordshire, or they are a specialist service / retailer that may be useful.

If you are a supplier of eco-renovation products or services in Oxfordshire, and are not included the directory, please send us your details using the form at the end of the directory.

NATIONAL SUPPLIERS SITES

Green register - <http://www.greenregister.org.uk/>

The Green Register is one of the UK's leading organisations promoting sustainable building practices across all disciplines of the construction industry through unique training and events.

Tzero - <http://www.tzero.org.uk/>

T-ZERO is a free web-based tool that identifies the optimal low-carbon solutions tailored to specific house types. Define your home and T-ZERO will establish its fuel bill and carbon footprint, then identify optimal insulation, heating, and renewable energy options, based on your budget and refurbishment goals. The T-ZERO Marketplace can put you in touch with local suppliers and installers of the recommended measures, and you can request a quote directly through the site. Users can also upload their experiences of projects, products and services to create a directory of case studies of practical benefit to others.

You Gen - <http://www.yougen.co.uk/>

YouGen is here to make it easy for you to improve the energy efficiency of your home, find a suitable renewable energy technology and buy with confidence. Use the site to:

- Find out the about [renewable energy](#) from an independent source
- Read the tips from our [Energy Experts](#), [ask one a question](#) and learn from other people's comments.
- [Find people](#) who have already installed the technology you're interested in or [find a local supplier](#) to install it for you.
- [Add information about your company](#), so that it will appear in search results and customers can recommend you.

ENERGY AUDITS AND TOTAL SOLUTIONS, ASSESSMENT, PLANNING AND MANAGEMENT

Ardenham Energy www.ardenhamenergy.co.uk

Telephone **01296 331362** Email: info@ardenhamenergy.co.uk

Ardenham Energy works for individual homeowners as well as developers, contractors and their consultants. We hope that our technology can help you.

Blewburton Partnership: www.blewburtonpartners.com

BBP are an energy and sustainability consultancy specialising in the built environment. Much of our work, though not exclusively, is focused on the domestic building sector. As well as offering SAP calculations and Code for Sustainable Homes assessments, we have experience in assisting with the selection and choice of the correct energy systems and sustainability options for existing properties. We can also apply these skills to community and commercial buildings as and when required. We have a particular expertise in renewable energy and practice what we preach through the installation of three different renewable energy technologies at our offices.

Andy Paterson Architects

Andy Paterson Architects specialise in a range of largely domestic architecture from historic to contemporary; we are equally experienced with conservation, renovation, extensions or new build. Our work is defined by the very specific within the wider context of sustainability; the principle is to minimise a building's energy use while maximising its spatial potential.

We advise on and can become involved with projects from concept to completion. Our experience is hands-on as well as design based and we make good relationships with both client and contractor.

Hess Kincaid Leach Architects www.hess-kincaid.co.uk

Hess Kincaid Leach are Eco Architects dedicated to Environment conscious building. We are a RIBA Chartered Practice. We have extensive design and construction experience. Having studied specifically Green and Bio-climatic Architecture, our design expertise includes: Passive solar housing, integrating active energy systems, sunspaces and how to integrate them, retrofit and new build energy efficiency with thermal and energy modelling. Our projects include passive solar houses, listed and historic buildings, extensions, and eco renovations.

We embrace a holistic approach, looking at each project in the round; we see the building as an organism rather than a machine, where above all, human beings play a part in designing and living a complete solution.

Oxford Office: 39 Radcliffe Road, Oxford, OX4 4BX

gil@msarch.co.uk or email@msarch.co.uk

www.msarch.co.uk

Richard Twinch Design: www.twinchdesign.co.uk

Imagination linked with experience and knowledge integrates low energy design into sustainable architecture. This results in flowing spaces, efficient constructions and places for appreciating the beauty of the natural order. Good use of natural and artificial light is also a great way of saving energy. Active measures (solar etc.) also incorporated where appropriate and where budgets allow. Proven new technologies married to traditional constructions. Richard Twinch RIBA Phone: 01865 202108 Email: twinch@community.co.uk

Also available for community groups: I'm happy to travel 30 minutes drive away from central Oxford to give talks to local groups, preferably early evening. I can present and discuss options for insulating roofs, walls and floors starting from theory to practice. The informal presentation includes handling various insulating materials and demonstrating Thermographic imaging.

West Waddy ADP are architects and town planners with particular expertise in sustainable design. Our portfolio of work includes private and public housing as well as commercial and educational buildings. We have particular skills in helping to reduce the carbon footprint of existing buildings, including listed and other heritage assets. We employ an environmental specialist and Code for Sustainable Homes assessor and will advise home owners upon all scales of development from small improvements to large extensions, renovations and new dwellings.

Independent and impartial advice is essential to avoid unnecessary cost and wasted money. Beware the salesmen selling individual technologies! By adapting an holistic approach to your home we will ensure that often quite limited funds can be targeted to achieve best returns.

West Waddy ADP also advise upon grants and loans available to homeowners for environmental improvements. We can undertake an independent energy audit and report of your home or other building with clear advice upon options to reduce your carbon footprint. These options can include an assessment of likely financial as well as carbon savings.

Our 'Toolkit' for sustainable homes gives options to enhance performance and reduce energy demand starting with the 'free' or low cost solutions as follows:

- Changing habits
- Making repairs
- Reducing air leakage
- Improving insulation
- Assessing boiler plant, controls and technology
- Exploiting thermal mass where appropriate
- Assessing the options and value of renewable technologies

At West Waddy ADP we are not tied to any system, product or technology so our advice is fully independent and covers all the major energy saving options currently available within the market place.

For further details or to book an energy audit of your home please email enquiries@westwaddy-adp.co.uk or alternatively telephone 01235 523139

Sempatap – Insulation Solid Wall properties (Mould Growth Consultants Ltd)

SEMPATAP THERMAL is thermal insulation on a roll, as easy as wallpaper to apply which dramatically reduces heat loss through cold walls and ceilings.

SEMPATAP THERMAL is approved by The Energy Saving Trust as an energy saving product and is also an EST "Recommended" product for the insulation of solid wall homes. SEMPATAP THERMAL can be applied to all types of solid wall properties and there is also a variety for floors.

SEMPATHERM RADIATOR Insulation Panels fit behind your radiators to improve convection and reduce heat losses. In DIY packs of 10 or 20 they are easily fitted and you don't heat your wall.

An independent company specialising in the design and installation of solar hot water and photovoltaic systems to harness the sun's energy for household use. We offer pragmatic, independent advice to help you choose the solar solution that is right for you in order to help you to reduce your household energy consumption.

Contact: paul@simssolar.co.uk Phone: 07717 004240.

Solar Solutions Direct www.solsol.co.uk

Based in Eynsham, we are Oxfordshire premier installer of high quality Solar Thermal systems. Being MCS accredited our customers are able to claim Government Grants, which for non profit making organizations can be up to 50%. We are also members of The Solar Trade Association and our customers are protected by the REAL assurance scheme. Though various partnership agreements with the major manufactories we are able to offer a specialist design service for large industrial application. In addition our Solar work, we have "Gas Save" engineers, who can carry out boiler replacement/servicing and other general plumbing requirement. We also have a specialist division that handles the installation of Ground and Air Source Heat Pumps and a partner company that can look after customer Solar Voltaic requirements.
Unit 1, Oakfield Industrial Estate, Eynsham, OX29 7TH

FLOODING, RAINWATER HARVESTING, GREY WATER & GUTTERING

Emission Strategy Solutions Limited (flood prevention) www.ems2.com

Whether you're at risk from flooding, or have already been flooded, we offer you a starting point for help. Our carefully selected recommended products and our flood services help you take control of this big risk.

Our recommended products include established, kite-marked, flood prevention kits, and an innovative flood detector offering early-warning of storm or sewer drain overflow.

You can participate in basic or detailed workshops to understand the flood

planning process, or produce a signed-off flood plan. If you've been flooded, we offer a chance to step back - turning this disruption into an opportunity to reassess your future.

Rain Unlimited – Rainwater Harvesting www.odm.co.uk/rain-unlimited/

Rain Unlimited was founded in 2006 by two friends from Abingdon. We install large underground water tanks, collecting water efficiently anywhere in your garden and your home.

We are not linked to any manufactures and will always seek the most cost effective solution, and only use approved and certified products.

Grey Water installations require extensive plumbing and additional filtering. You should seriously consider this option, when you are renovating your bathrooms.

Use the Rain www.usetherain.com

Use the Rain supplies and installs rainwater harvesting products to meet domestic and commercial requirements. Water is precious as we all know and if climate predictions are to be believed, could be even more so in the future. Here at Use the Rain, we think rainwater is worth saving and, of course, it's free! Some of the benefits include:

- Financial savings for metered supplies
- Ongoing water availability during hosepipe bans
- Environmental reasons

Clanfield Gutter Repairs www.clanfieldgutter-repairs.co.uk

Bespoke Guttering Services covering the South of England. Established in 1979, our independent **guttering** company works closely with architects and specifiers, providing a complete project management service tailored to meet your needs.

We undertake traditional and modern **guttering** services for all types of private homes as well as commercial and industrial premises. All properties require well-maintained gutters. Gutters stop the rain from damaging your property, by protecting the walls and foundations from the damp.

Phone: 01865 389 622

SUSTAINABLE GARDEN DESIGN

GreenScapesDesign

GreenScapes provides design expertise for the creation of sustainable gardens. We specialise in the design of rainwater management systems and gardens with low water use, and use plants to help conserve heat in the house in winter and reduce overheating in summer.

Biodiversity is also a priority, and we encourage the use of indigenous plants, and natural methods of pest and disease control, to create wildlife-friendly environments. For hard landscaping projects we choose our

materials with care to minimise the ecological footprint, and promote the use of recycled aggregates, rammed earth, dry stone walling and lime mortar.

LIGHTING

It Must be Green

It Must Be Green sells environmentally friendly products to help towards a sustainable future. We offer more environmental alternatives to everyday products such as torches & radios, eco gifts & gadgets, and local and recycled items. Our goal is to bring knowledge about environmental products to our customers to help them make a more informed decision. We look to offer customers what they are looking for and not solely to make money, believing that customers are more important than profit.

Finally, we have tried every single product that we sell - and if we don't like it, we won't sell it. It's as simple as that!

MATERIALS (INCLUDING PAINTS) AND SALVAGE

Lime Technology

Lime Technology is an innovative company, specializing in building materials with low, zero and negative embodied energy. Our

expertise allow for the development of low impact buildings at construction stage, and perhaps more importantly, throughout the life of the building. Our most recent development, Hemcrete®, is a composite walling material of industrial hemp and a lime based binder.

Other products we have developed, including premixed Lime mortars and renders, enable the reuse and recycling of masonry and Sumatec Unfired Compressed earth blocks, a block made with waste earth clays.
